

Manage Cyber Risk in Financial Terms

Make Smart Security Decisions

Nehemiah Security provides a simple SaaS solution, Risk Quantifier™ (RQ), that automates cyber risk quantification in hours, not months. RQ continuously measures financial loss associated with cyber risk to enable you to make more informed business decisions.

Stop Guessing.

Defend Your Next Security Spending Decision with Results You Can Measure.

USE RQ TO DETERMINE THE CYBER RISKS SPECIFIC TO YOUR COMPANY

Calculate a view of your financial risk to cyber attacks

RQ provides a cost-effective way for quantifying risk so businesses of all sizes have a better understanding of risk and the ROI of security investments.

DEFEND SECURITY DECISIONS

with data-driven results

DRIVE SECURITY INVESTMENTS

with ROI metrics

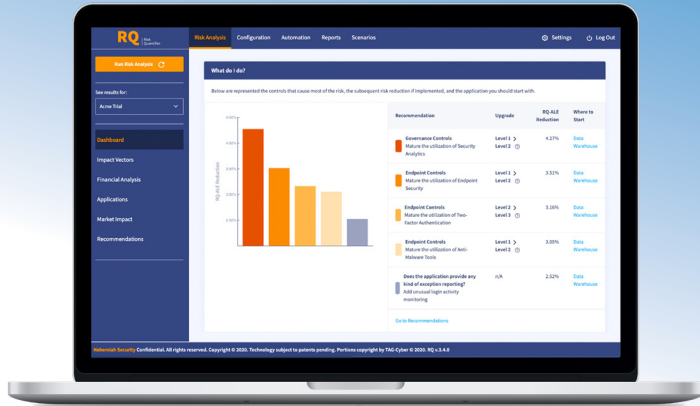

MONITOR & COMMUNICATE

cyber risk financially

PRIORITIZE SECURITY

exposure based on business risk

3-Step Approach to Automating Risk Quantification

Take the Guesswork Out of Risk Quantification

MODEL. QUANTIFY. RECOMMEND.

Combining your custom input with the Nehemiah Risk Intel Database, we model cyber risk attack paths, quantify cyber risk in dollars, and recommend security control improvements.

MODEL & PREDICT RISK PROACTIVELY

Leverage existing data on your business applications and IT systems to map an inside-out, unified view of the risk environment. Let RQ model probable attack vectors against key areas of your business to predict loss exposures and business outcomes, so you stay ahead of unacceptable losses.

RECOMMEND & DRIVE SMART ACTION

Activate risk mitigation plans with recommended security controls to reduce loss exposures. Calculate the ROI of these investments to underpin budget proposals and defend security decisions.

QUANTIFY CYBER RISK IN BUSINESS TERMS

Quantify and monitor potential financial impacts of cyber risks over time. Armed with metrics like business interruption, reputational damage, and legal fines, leaders can proactively escalate security initiatives.
